

THE EDUAI PRODUCT STORY

AI teacher: Scaling Personalized Learning

How I independently designed, built, and shipped an interactive AI tutor to solve India's foundational learning paradox.

ANURAG MN | PRODUCT MANAGER, MAKEMYTRIP
(<https://www.linkedin.com/in/anurag-mn/>)

Great Teachers Do Not Scale

"I've mentored underprivileged students, taught younger relatives, and watched my aunt dedicate her life to teaching in a government school.

Across all of these experiences, a single design-truth became absolutely clear: **Great teachers change lives—but they do not scale.**"

Marcello Bacciarelli's *Alcibiades Being Taught by Socrates* (1776) (Wikipedia)

The Foundational Learning Crisis

44.8%

Of Grade 5 students can read basic Grade 2 text.

Furthermore, only **30.7%** of Grade 5 students can solve a basic division problem.

India operates one of the largest educational structures globally, with:

-  **250 Million** students nationwide
-  **10 Million+** teachers
-  **Outcomes Problem:** Lack of personalization at scale

The Paradox and the Enabler

The Bottleneck

Every student has unique pacing, mental models, and knowledge gaps. Classrooms, designed for uniformity, force teachers to teach to the middle. Personalization hasn't scaled historically because human capital is constrained.

The Unprecedented Wedge

According to ASER 2024, nearly **90% of children aged 14–16** have access to a smartphone at home, and over **80%** know how to navigate it. The delivery layer is already in their hands.

"We have a distribution infrastructure that reaches almost every pocket of the country.

What if we deployed a high-quality, personalized AI teacher through it?"

INTRODUCING EDUAI

Class 7 Math & Science

The Strategic STEM Wedge

I targeted Class 7 STEM because this is the critical crossroad where student psychology shifts—they either build deep confidence or develop lifelong fear.

EduAI is an independent, mobile-first product that bridges intuitive conceptual simulations and natural-language AI coaching.

NCERT ALIGNED • CONCEPT BASED LEARNING

NCERT CLASS 7

AI TUTOR & LABS

NCERT ALIGNED | BUILD STRONG CONCEPTS | IMPROVE UNDERSTANDING | TRUSTED BY STUDENTS & PARENTS

150+ Interactive Concept Labs

Pendulum Motion: Interactively discover how length controls period oscillations.

Experiment Goal

Test whether **length** affects **time period**. We'll swing three pendulums of different lengths and measure how long each takes to complete 10 oscillations.

Conduction of Heat: Live thermal comparison between metals & insulators.

Key Concept

Convection transfers heat by fluid movement. Hot fluid rises (less dense), cold fluid sinks (more dense). Tap particles to track them!

The EduAI Product Architecture

Interactive AI Tutors

AI Math & Science teachers that converse and explain step-by-step. Built to trigger discovery, not just output answers.

Multi-Sensory UI

Voice narration perfectly synced with on-screen text highlighting to support varying comprehension levels.

Play-Store Ready

Lightweight, offline-optimized, and engineered to run fluidly on affordable Android devices with low RAM.

Educator Co-Design

Co-developed with Prajna Mathematics

Making complex mathematical ideas concrete, highly visual, and accessible. Collaborated closely with educators and IIIT B students to co-design learning systems.

 **Student-Led Iteration:** Shipped directly to students for fast loops.

 **Conceptually Sound:** Validated by pedagogy experts.

Engaging via Conversational Voice

Interactive learning companion designed with customizable avatars.

- ✓ **Natural Language First:** Adapts explanation styles proactively based on previous query depths.
- ✓ **Multilingual Voice Engine:** Explaining concepts comfortably in regional languages, avoiding English barriers.
- ✓ **Real-time Synchronized Focus:** Helps students visually connect auditory words to mathematical models.

Market Positioning Map

Mapping Educational Tech Approaches

The landscape divides along two strategic dimensions: standard library-based distribution versus real conversational guidance.

- ✓ **Content Libraries:** Broad access, but rely completely on a student's self-motivation.
- ✓ **EduAI Positioning:** Uniquely anchors the high-personalization conversational tutor quadrant, combining simulated environments with interactive voice coaching.

Feature Capability Matrix

Capability	EduAI	EduRev	Physics Wallah	Khan Academy	BYJU'S
NCERT / School Content	✓	✓	✓	✓	✓
Recorded Video Lessons	✗	✓	✓	✓	✓

Doubt Solving	AI Teacher	Community + Teachers	Faculty Based	Limited	Faculty Based
Interactive Simulations	150+ Labs	✗	✗	Few	Few
Voice-first Learning	Native	✗	✗	Limited	Limited
Personalized AI Conversation	Core Product	Basic	Emerging AI Features	Limited Personalization	Partial
Multilingual AI Teacher	Roadmap/Core	Limited	Limited	Limited	Limited
Adaptive Learning Path	Roadmap	Limited	Limited	Strong	Moderate
Works Like Human Tutor	Yes	No	No	No	No
Designed for Class 7 STEM	Yes	Broad Exam Prep	Exam Prep	Broad Learning	Broad Learning
Free Access Model	Freemium	Freemium	Freemium	Free	Freemium

Monetization & Unit Economics

FREEMIUM (MASS REACH)

- Free access to 150+ simulations
- Limited daily AI Teacher interactions
- Core quizzes & learning content
- Ad-supported to subsidize compute

PREMIUM (₹149/MO)

- Unlimited AI Teacher queries
- Real-time voice conversation agent
- Personalized tracks & progress insights
- Ad-free focused premium experience

Why Freemium First?

- ✓ **Democratic Access:** Tutor in every home.
- ✓ **Accelerated Loops:** Fast viral organic growth.
- ✓ **90% Tech Wedges:** Leverage active device base.
- ✓ **Ad-Offset:** Monetize the massive non-paying layer.

Unit Economics (Illustrative)

High scale operating margins as model costs plummet

Metric	Value
Premium Price	₹149 / mo
Annual ARPU (Premium)	₹1,788
AI API Cost per Active User	₹20 – ₹50 / mo
Target Gross Margin	65% – 85%

**Computational token costs are dropping 50% YoY globally, structurally expanding operating margins over time.*

Evolving Into an Agentic Teacher

PHASE 1

Reactive Tutors & Sims

Currently live. Responsive math/science answers and virtual lab discovery environments.

PHASE 2

Multilingual Vernacular

Delivering high-quality teaching in Kannada, Hindi, Tamil, Telugu, Marathi, and Bengali.

PHASE 3

Agentic Adaptivity

Proactive lesson planning. Remembers individual student context, memory levels, and specific triggers.

"Our goal is a complete democratized digital school. Voice and computing costs are dropping at an exponential rate. Scaling high-end human coaching to 250M students is impossible, but AI teachers make it trivial."

The Builder's Mindset

"Nobody asked me to build this.

There was no stakeholder review, no roadmap alignment meetings, and no corporate approval loops.

I saw an immense national bottleneck, worked directly with core educators and real students, coded the solution, and delivered it to Play Store."

Parallel Perspectives

If Zamp is building digital employees for enterprises, I am building digital teachers for classrooms.

The Shared AI Belief

AI must step beyond simple query interfaces. It must assume heavy contextual responsibility and execute real, high-value work on behalf of humans.

DEMOCRATIZED FUTURE

Thank You

"Every single child in India deserves an outstanding teacher that truly understands them. AI is finally enabling this at massive scale."
